**Re: East Mountain Filing 11 (Planning Area 9E)
Final Planned Development Plan and Preliminary Plat Application**

Dear Catherine,

Please find enclosed East Mountain Filing 11 Final Planned Development Plan (FPDP) and Preliminary Plat Application. As discussed at our April 26, 2018 meeting, the intent is to create a residential enclave within the eastern portion of Rendezvous Planning Area 9E.

This enclave consists of 22 single family attached and 11 single family detached home sites that are configured around a central trail and open space system. The home sites have been strategically configured and oriented to maximize views and access to open space. This enclave will provide an additional housing alternative within the Rendezvous community. The homes and open space amenities have been strategically configured to accommodate a multi-generational population.

As illustrated on the FPDP, the intent is to establish an open space system that will be utilized to accommodate community gathering areas and trails. The community soft surface trail will serve as a connection to the Rendezvous trail system and the Linear Park via the Fraser River bridges that are located adjacent to the Mountain Man Park and west of the Filing 9 neighborhood. Trail connections are also provided to connect with the Rendezvous trail system. As illustrated on the attached, trails will also connect with the transit stop that is located on the west side of Rendezvous Road.

The FPDP is consistent with the provisions outlined in the East Mountain PDDP with regards to land use, open space and density. Development standards outlined in the East Mountain PDDP have also been incorporated and maintained in the Filing 11 FPDP. Covenants, Controls and Restrictions (CC&Rs) will also be utilized to control the design within the community. A DRAFT of the CC&Rs are included in this application.

This plan has been configured to incorporate the infrastructure improvements into the plan. As discussed in our meeting, there are existing utilities that will be utilized to provide the required services. Please see the enclosed utility plans. Enclosed with this FPDP and Preliminary Plat is a grading and utility plan that further illustrates the proposed services.

As illustrated on the attached, primary access is to be provided via Rendezvous Road and Pioneer Trail. The streets shall be private and maintained by the community. Streets have been horizontally and vertically aligned to integrate with the existing topography and constraints. Traffic generated by this enclave will be less than what is contemplated by Rendezvous Traffic Impact Report.

With regards to potential impacts, this Planning Area has been incorporated within the original approved PDD. Project infrastructure, drainage and transportation design improvements have been completed with the understanding that this planning area will be developed. As outlined above, this site plan will also provide several trail connections within the community.

The intent is to plat Filing 11 as one single phase. Construction is estimated to start in July 2018.

Please review the enclosed FPDP and Preliminary Plat application. We appreciate the opportunity to submit this application for consideration and review. I am available to discuss further should you have any additional comments.

Sincerely,

Vogel & Associates, LLC
