

## East Grand School District – Land Dedication / Fee-in-Lieu Analysis – Draft– 3/14/25

**Executive Summary** – Western Demographics has conducted a land dedication and fee-in-lieu of land dedication analysis for East Grand School District that can serve as an update to the current fee system and as an adaptation of the system to make it more consistent with standard fee methodology in use in most Colorado districts. The current methodology is based on an older County ordinance that is not consistent with current land use types and does not use contemporary metrics to measure school impacts. The existing methodology does not differentiate between the various Grand County communities which produce differing amounts of students given proximity to resorts. The fees and dedication acreages presented in Figure 1 address this condition and provide a policy framework by which individual values may be assigned to each community and the unincorporated Grand County area.

Fees are proposed for the four dwelling types: Single family detached (SFD), single family attached (SFA), mobile or modular construction (MH) and apartments (APT). The MH category is the districts highest child-producing dwelling type and generally includes both traditional mobile homes and modular housing defined as any dwelling manufactured elsewhere and hauled in for on-site assembly. Mobile homes tend to produce the most school children per unit in most Colorado districts and are generally perceived as an affordable housing option. The EGSD BOE expressed a desire to substitute the lower of the single family and mobile home values for the generally higher mobile home rates, a substitute figure for this strategy is shown.

**Figure 1 – ECSD - Summary of Proposed Fee-in-Lieu and Land Dedication Values**

| Jurisdiction             | SFD         | SFA         | Use Lower of SFD and MH for MH | APT       | MH          |
|--------------------------|-------------|-------------|--------------------------------|-----------|-------------|
| Fraser                   | \$ 2,098.97 | \$ 929.29   | \$ 1,972.58                    | \$ 495.62 | \$ 1,972.58 |
| Granby                   | \$ 2,773.01 | \$ 1,298.53 | \$ 2,773.01                    | \$ 674.05 | \$ 4,936.41 |
| Grand Lake               | \$ 560.05   | \$ 369.24   | \$ 560.05                      | \$ 369.24 | \$ 560.05   |
| Hot Sulphur Springs      | \$ 2,837.45 | \$ 1,538.91 | \$ 2,837.45                    | \$ 738.48 | \$ 3,702.31 |

**Introduction** - Western Demographics conducts land dedication and fee-in-lieu analyses and updates of fee systems for districts all over Colorado and was hired to explore the fees that would be appropriate for East Grand School District if it were to follow the methodology used elsewhere in the State. The districts' basis for calculation of the fee is based on a Grand County ordinance methodology that is not aligned with fee methodology used elsewhere in the State. The current methodology is at least 30 years old and uses an older framework for quantifying municipal service impact of new development.

The current methodology is consistent among all communities in the district regardless of the number of students produced by local housing. Further, the methodology does not consider site development costs that are always incurred as school sites are developed from raw pasture or forest land.... As municipal infrastructure costs have risen, most Colorado districts have moved to a developed land cost basis instead of raw land cost for their fees to reflect the cost to serve school sites with water, sewer, electric, street infrastructure and other needs. This analysis recommends developed land cost as a parameter and recommends an update to the fee-in-lieu values to reflect this.

**The History of School Site Dedication and Land Dedication of School Site Dedication in Colorado** – For over fifty years, cities, towns and county governments in the State of Colorado have collected land or fees from developers and builders to assist school districts with the provision of school sites. In general, the land dedication / fee-in-lieu policies have joined other municipal and special district efforts to provide sites and facilities for parks, recreation centers, police, fire and library facilities for communities. Western Demographics has been involved in creating new fee systems or in updating them during the past 40 years and, gradually, Western Demographics has worked to make logical, consistent methodology prevalent throughout the State. The foundation of this methodology is based on municipal service provision calculations presented in early city planning textbooks and these methodologies were found in dedication ordinances in Adams, Arapahoe, Boulder, Denver, Douglas, El Paso, Jefferson and Larimer counties in the early eighties. Western has worked to expand this consistent framework throughout the State.

**School Site Dedication and Land Dedication of Land Dedication Calculation - Methodology** - The calculation for school site acreage and cost is relatively simple and includes the following elements:

- 1) A land value is collected from comparable sales or appraisal method to establish cost per acre for potential school sites;
- 2) The desired school site size is established to determine the acreage needed for a facility;
- 3) The desired school enrollments are added to establish the number of students that will be housed in a school; and
- 4) The student yield or average number of students from housing completes the formula.

The following diagram illustrates the variables and how the various units cancel out as the formula is completed and cost per housing unit is established. Residential densities are differentiated based upon the acreages assessed for single family homes, townhomes, apartments and mobile homes.

**Figure 2 - Simplified School Site Acreage / Fee Formula**

**EGSD School Size Parameters** – Rural and resort school districts tend to construct smaller schools to serve large areas. The EGSD did not appear to have school size parameters in its policy manual and these are only present in less than a third of Colorado school districts. The average sizes of the current schools were used in place of declared school enrollment goals. The site sizes that were included in the fee calculation were derived from site size standards published in the Council of Education Facility Planners International (CEFPI). CEFPI is an international association of school planners that publishes a school planning and design manual which along with a few textbooks published over the years constitutes the only formalized information on the topic of school site size. The formula for elementary schools starts with ten acres and adds one acre per 100 students. The formulas for middle and high schools start with twenty and thirty acres respectively and add one acre per 100 students. Figure 3 displays the final input variables for EGSD.

**Figure 3 – School Size and Site Acreage Variables**

| Metric / Level    | Elementary School | Middle School | High School |
|-------------------|-------------------|---------------|-------------|
| School Enrollment | 300               | 300           | 400         |
| Site Acreage      | 13                | 23            | 34          |

**EGSD School Student Yield Data** – A large portion of school dedication fee methodology is student yield. The current fees use student yield estimates from Census data. The proposed methodology uses student yield values based on current students that are geolocated by address and compared to housing types in sample neighborhoods to develop “students per unit values”. The original methodology used one set of values for the whole county and the proposed system differentiates by community as there are more students per unit in Granby and Hot Sulphur Springs than there are in Winter Park. Further, mobile and modular homes produce more students in the EGSD than any other dwelling type followed by single family detached. Apartments and condominiums produce very little. These differences in the yield values are shown in Figure 4. Some school districts choose to use single family detached yield values in place of higher mobile and modular home values to avoid any perception of penalty for the more affordable mobile home dwelling type. A substitute set of fees and acreages for the mobile home category is provided by this analysis to address that strategy.

Not all dwelling types were found in all communities (in a quantity that would represent a usable sample size). In those cases, average (district-wide) values for those dwelling types were used. In addition to the yields calculated for the incorporated towns, the “areas” that are represented by Census Designated Places (CDP’s) are also included along with yield for a sample of units in unincorporated Grand County. An average of all of these is also included if the community prefers to remain with a single fee for the entire district. Elementary yield is shaded in rose color, middle school is shaded blue and high school is shaded green.

**Raw Land Comparable Sales** – Raw land value was calculated by collecting comparable land sale data with the following parcel requirements:

- Vacant - 5 - 41 acres, access to paved roads & utilities or potential for a sewer packet plant
- Broadly distributed throughout the district
- Access to paved roads
- Arm's length sales within the past six years with 5% annual price adjustment
- Sales records include price and acreage data clearly visible in County records

**Figure 5 – EGSD Raw Land Comparable Sales**

All comparable sales were vetted by Grand County staff and an average value per acre of raw land of **\$21,883.12** was obtained.

**Developed Land Costs** – The current methodology uses a raw land value only. Some fee assessments have been based on individual residential lot value. The goal of creating a single developed land cost plus raw land based on larger acreage samples is to create a consistent valuation/cost framework for all areas. Further, the larger samples used for raw land value (over five acres) are more consistent with the size of most school sites than an individual residential house lot (one acre or less).

During the past twenty years, school districts have increasingly begun to be challenged by the costs to provide “shovel ready” school sites for bond-funded school projects. In general, school construction costs have increased by double-digit inflation rates with current school construction costs exceeding \$700 per square foot... School sites that begin as pastures or vacant, undeveloped parcels must have streets, water lines, sewer lines, storm sewers, electrical, gas and broadband before schools can be activated... It is estimated that each acre of land carries a rough infrastructure cost of **\$126,804** to be made viable for an institutional building. Cost data

was extracted from RS Means cost estimation manuals for institutional construction and compared to recent experience with local projects including Greeley's Tointon K-8 Academy and Johnstown's Roosevelt High School and ElWell Elementary School. RS Means is the primary cost estimation source used in the construction industry.

**When to Collect Fee-in-Lieu vs. Land Dedication** - Most land developments are smaller than the total number of lots needed to justify an entire school site or a meaningful partial site. In those cases, school districts request the fee necessary to assemble resources to purchase an adequately sized site to serve students produced by the development combined with other developments or existing housing in the area.

**Land Dedication Calculations – Fee Calculations** – The following Figures 8 – 14 show the detailed calculations for fee-in-lieu for each community along with unincorporated Grand County and the average for the entire district. Since most districts the size of EGSD use fees instead of land dedication, the fees are presented first. Dedication acreages will follow the fee tables.

**Land Dedication Calculations – Acreage Calculations** – When developments are large, the district would be able to accept school land instead of fee if that were deemed best. Figures 15 - 21 define the acreage values for each community.

**Summary** – The methodology presented in this report would result in the EGSD having a land dedication / fee-in-lieu of dedication system that would be consistent with other Colorado districts. The proposed methodology uses developed land values, localized student yield values and differentiates fees by community and dwelling type based on student yield. The definitions for dwelling types are consistent with current municipal practice. All jurisdictions are represented along with well-known areas that are represented by Census Designated Places along with fees for the EGSD portion of unincorporated Grand County.
